The goal of this two-day hands-on workshop is to discuss the parameters related to the sinus augmentation procedure, its relationship to implant placement and longevity of restorative treatment.

The atrophic posterior maxilla poses a challenge for implant placement not only due to the nature of bone quality but also due to the pneumatization of the sinus. Considering the purpose of lateral sinus augmentation is to place an implant with long-term function without complications, it is necessary to review the parameters that influence implant placement and long-term functional success. These include incision design, widow shape, additional GBR, simultaneous implant placement, time of implant placement, surgical instruments, implant design, graft material, and management of complications.

New York University College of Dentistry is an ADA CERP Recognized Provider. ADA CERP is a service of the American Dental Association to assist dental professionals in identifying quality providers of continuing dental education. ADA CERP does not approve or endorse individual courses or instructors, nor does it imply acceptance of credit hours by boards of dentistry. Concerns or complaints about a CE provider may be directed to the provider or to ADA CERP at www.ada.org/cerp.

ADA CERP® Continuing Education Recognition Program

The formal continuing dental education programs of New York University College of Dentistry are accepted by the AGD for Fellowship, Mastership and membership maintenance credit. Approval does not imply acceptance by a state or provincial board of dentistry or AGD endorsement.

New York University is a member of the Association for Continuing Dental Education. The ACDE is the organization of continuing dental education providers associated with dental schools in the United States, Canada and Puerto Rico.
