THE DIAGNOSIS AND TREATMENT OF MUCOSITIS AND PERI-IMPLANTITIS

Lecture & Hands-on Course
NON-SURGICAL / SURGICAL / PROSTHETIC TECHNIQUES

Presented by Stuart J. Froum, DDS; Paul S. Rosen, DMD, MS; and Chandur Wadhwani, DDS, MSD
Friday, April 27, 2018 - 1:00 pm - 5:00 pm and Saturday, April 28, 2018 - 9 am - 5:30 pm
Course Location: New York University Dental College, 345 East 24th St., 1st fl., Clinic 1W, New York, NY

Friday 4/27 DAY 1 Saturday 4/28 DAY 2 Tuition

Course Hours Course Hours 8:00 am - 9:00 am Lecture /Hands-on study
12:00 pm - 1:00 pm Continental Breakfast provided
1:00 pm - 5:00 pm Lecture /Hands-on study

11 hrs

This day-and-one-half program is designed as a continuum. Attendees cannot sign up for just the lecture portion of the program or the hands-on alone as the information will build upon itself.

FACULTY
Stuart J. Froum, DDS
– Adjunct Clinical Professor of Periodontics and Implant Dentistry and Director of Clinical Research (Department of Periodontics and Implant Dentistry), New York University Dental Center
– Diplomate of the American Board of Periodontology
– Past President of the American Academy of Periodontology 2013/2014
– Diplomate, International College of Oral Implantology
– Periodontics & Implant Dentistry
– Private Practice, New York, NY

Paul S. Rosen, DMD, MS
– Clinical Professor of Periodontics, University of Maryland Dental School, Baltimore, Maryland
– Adjunct Professor, James Cook University Dental School, Smithville, Australia
– Diplomate, American Board of Periodontology
– Diplomate, International College of Oral Implantology
– Private practices, Yardley, PA and New York, NY

Chandur Wadhwani, DDS, MSD
– Affiliate Assistant Professor, Restorative Department, University of Washington, Seattle, WA
– Adjunct Assistant Professor, Advanced Education, prosthodontics, Loma Linda University, Loma Linda, CA
– Clinical Associate Professor, Periodontics, Oregon Health & Science University, Portland, OR
– Past President of the Washington State Society of Prosthodontists and the Tucker 60th Study Club
– Private practice, Bellevue, WA

Friday, April 27, 2018 - 1:00 pm - 5:00 pm and Saturday, April 28, 2018 - 9 am - 5:30 pm

COURSE OVERVIEW
Peri-implant mucositis and peri-implantitis are two inflammatory diseases that affect the success and survival of dental implants. Their growing prevalence has become a concern for the patients of any clinician placing and/or restoring implants, as no implant system is immune to these problems. This program is comprised of both a lecture and a hands-on portion that will provide clinicians with cutting-edge in-depth information on the diagnosis, etiologies, prevention, and treatment of peri-implant mucositis and peri-implantitis. Attendees are encouraged to bring x-rays, photos and scans of peri-implantitis cases that they treated or intend to treat, for discussion or planning, so that they may discuss these with the faculty. Also, attendees will have the opportunity to check their own torque drivers to see if they are currently calibrated.

The second day will consist of a continuation of the lecture along with providing hands-on practice for both the decontamination and the regenerative procedures that are used to treat early, moderate, and advanced peri-implantitis. Participants will work on models that simulate peri-implantitis lesions and the favorable faculty to student ratio will allow participants to learn some of the tips and tricks that the speakers have gained with each having close to two decades of experience. Proper selection and use of graftable materials, biologic agents, and barrier membranes to achieve optimal regenerative outcomes will be gone over in fine detail. In another portion of the hands-on session, several techniques for proper prosthesis cementation will be practiced to eliminate the risk that residual cement could play. These clinical skills that will be practiced in this hands-on course are designed for practical patient care and immediate implementation into one’s clinical practice.

COURSE OBJECTIVES
– Learn how to diagnose mucositis and peri-implantitis and classify the disease from early to moderate to advanced.
– Learn/Practice (hands-on) the most effective methods of implant surface decontamination.
– List the risk factors and preventive techniques for mucositis and peri-implantitis including proper probing force.
– Become familiar with/practice (hands-on) with the materials and techniques that have proven to be successful in rebuilding hard and soft tissue lost as a result of peri-implantitis.
– Learn/practice (hands-on) techniques to cement implant supported restorations while avoiding the problems of excess cement. This will include becoming familiar with angled screw-retained crowns.
– Review monitoring, improved record keeping, and maintenance of successful results.

TARGET GROUP
General dentists, Specialists and Implantologists working with dental implants or interested in providing dental implant treatment. No prior dental implant training required.

CE CREDITS PROVIDED
Neoss Inc. is an ADA CERP Recognized Provider. ADA CERP is a service of the American Dental Association to assist dental professionals in identifying quality providers of continuing dental education. ADA CERP does not approve or endorse individual courses or instructors, nor does it imply acceptance of credit hours by boards of dentistry. Neoss designates this activity for 11 continuing education credits. This continuing education activity has been planned and implemented in accordance with the standards of the ADA Continuing Recognition Program (ADA CERP) through joint efforts between CAIT and Neoss.
